

LO1: Interactive media products

My portfolio design was inspired by my hobby, since I am working by karate for a long time already, I decided to make my portfolio's design connected with it.

Here you can see some sketches and prototypes:

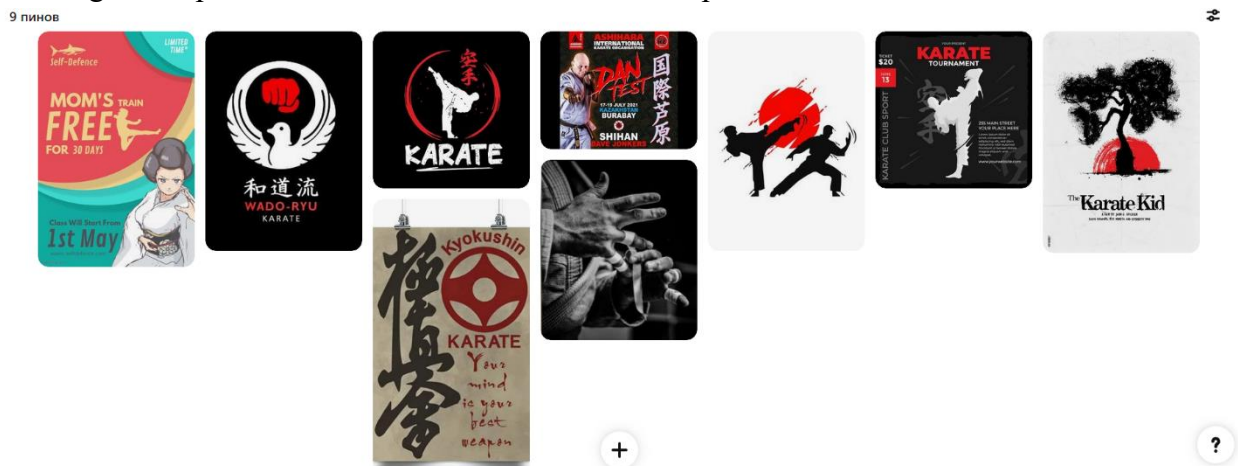

You can see my name and Japanese symbols which represent my name as well, you can see that it is connected if you pay attention to the color and font.

These symbols on Japanese you can see on my belt as well:

Looking for inspiration I have created a moodboard of pins in Pinterest:

Starting from this moment I started creating my own portfolio, here is clearly seen, that karate colors are black, red and white, so these colors I used.

Creating portfolio and get inspiration from somewhere was the hardest part this time, because I have spent many days trying to figure out what to include and how should my portfolio look. To my mind it has to be really simple with basic navigation thorough the website and somehow design of it and features should display my progress, so first of all I have created basics and then I will add more features and make my website more appealing.

For my portfolio, I chose primary font 'Bayon' I think it in some way connected with martial arts and especially in red color it fits the most.

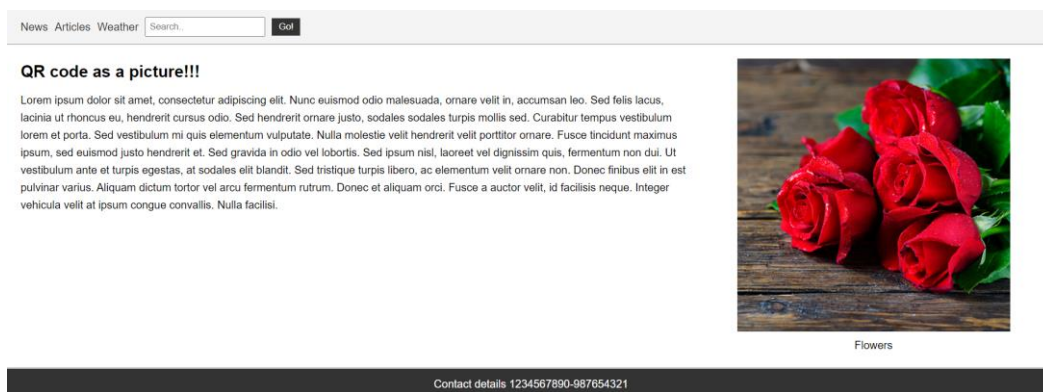

Secondary font is 'Lato' I have tried this font in our Branding project, but it didn't fit there so well as it could be and I tried it here and it fits!

LO2: Development & version control

During Development lessons I've also made some simple html and css webpages, exercises below made me clear how html tags should look:

```
7 </body>
8 <header>
9   <a href="">Articles</a>
10  <a href="">Weather</a>
11  <input type="text" placeholder="Search.."> <button type="submit">Go!</button>
12
13 </header>
14 <hr>
15
16 <article>
17   <div class="article-text">
18     <h1>QR code as a picture!!!</h1>
19     <p>Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nunc euismod odio malesuada, ornare velit in, accumsan leo. Sed
20
21       Donec finibus elit in est pulvinar varius. Aliquam dictum tortor vel arcu fermentum rutrum. Donec et aliquam orci. Fusce a
22     </p>
23   </div>
24   <aside>
25     <div class="photo-on-the-right">
26       <figure>
27         <picture>
28           
29         </picture>
30         <figcaption>Flowers</figcaption>
31       </figure>
32     </div>
33   </aside>
34 </article>
35 <hr>
36 <footer>
37   Contact details
38   1234567890-987654321
39 </footer>
40 </body>
41 </html>
```

And this is version with applied css that chatGPT made for me according to my html code:

LO3: Iterative design

During the project work I've made research about brand guide and filled it as well. It includes itself brand overview, brand colors, brand primary and secondary font and so on.

Typography

Primary font: Crimson Text

ABCDEFGHIJKLMNOPQRSTUVWXYZ
WXYZ

abcdefghijklmnopqrstuvwxyz

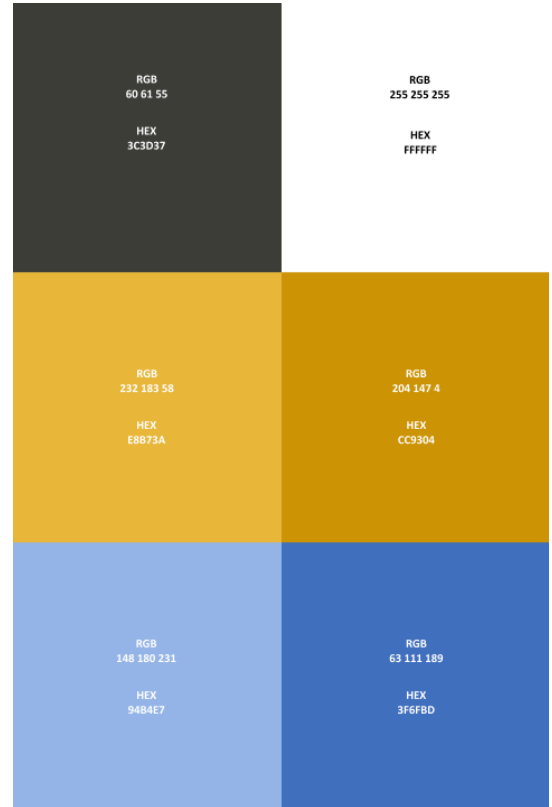

1234567890

Secondary font: Lato

ABCDEFGHIJKLMNOPQRSTUVWXYZ
WXYZ

abcdefghijklmnopqrstuvwxyz

1234567890

During introduction week, I made my business card which in future(with making some redesigning) can be used on my own.
